

LENOX® Presents GEN-TECH™, New Set-Style Carbide Tipped Band Saw Blade With HONEX™ Technology

LENOX Brings Manufacturers The Latest In Its Band Saw Blade Innovation With GEN-TECH

EAST LONGMEADOW, Mass. Aug. 17, 2020 – LENOX® a leader in carbide cutting performance, announces GEN-TECH, a new set-style carbide tipped band saw blade for general purpose cutting. Through innovative design and cutting technology, GEN-TECH offers versatility, long blade life, and a low cost per cut. GEN-TECH is proudly made in the USA with global materials in the LENOX East Longmeadow, MA manufacturing facility.

"Designed for versatility, GEN-TECH cuts a wide variety of materials, shapes and sizes. Ideal manufacturing industries that will use GEN-TECH include aerospace, defense and energy, with applications in carbon steels, bearing steels, mold steels, alloy steels, tool steels and stainless, as well as titanium and nickel-based alloys. Featuring a wide kerf set-style tooth structure, GEN-TECH helps to prevent pinching in these high-stress, hard to cut materials.

"An advanced grade of carbide that is honed, using HONEX Technology, contributes to GEN-TECH's long blade life by limiting chipping and therefore enabling productivity. In addition, the back edge of the blade can utilize Wave Tech®, which is designed for improved cutting efficiency by breaking through work hardening layers.

Finally, GEN-TECH offers an affordable price point to enable the transition from bi-metal to carbide band saw blades.

"New GEN-TECH carbide band saw blades provide versatility, long blade life and a low cost per cut," said Daniel Fernandes, LENOX Senior Product Manager, Industrial Band Saw Blades. "Designed with end-users top of mind, GEN-TECH delivers the performance and durability that tough industrial metal cutting applications demand."
